Cacti and succulents need less water; flowering plants usually need slightly more. Overwatering is one of the most common causes of houseplant death. If you're not sure how much to water, it's better to err on the dry side than to give your plants too much moisture. 2. Fertilize Houseplants Periodically.

If you don't want to buy a whole-house or room humidifier, try setting a small vaporizer near plants. Grouping plants helps, too, because moisture released by one plant can be picked up by another. Keep in mind that despite their love for humidity, plants need good air circulation to ward off disease. Leaves of individual plants should not touch.
