There may be 2 different issues happening. The first with the gateway not assigning IPv4 addresses. Try testing with multiple devices over Ethernet if possible. If you haven't tried already, do a software reset. Hopefully, that fixes the IPv4 assignment. For IPv6 DNS issues, try testing with Google's DNS to see if that fixes it.

I enabled IPv6 on the AT&T provided router and my WRT54GS. On the WAN side of the WRT54GS is able to obtain a global IPv6 address. Devices connected directly to the AT&T router can use IPv6 just fine. However, my LAN devices only ever receive local addresses. I have read that some gateways don't do router advertisement.

I recently activated an AT&T/Netgear Unite Pro 7815 for some traveling I'm doing, and it doesn't seem to be issuing IPv6 connectivity. I don't see any settings for it suggesting the Hotspot supports IPv6. AT&T's documentation is also pretty sparse, barely mentioning anything useful for IPv6 from what I can find.

I was able to get IPv6 routing working for some combinations of remote endpoints last week by manually adding a route to the gateway using its MAC-address-derived link-local address, determined by IPv4 ARP. I didn't save the route and after rebooting I lost IPv6. I'll have to look up the right address again to add to my persistent config.
