population of youth to health careers, is key to meeting national goals in helping eliminate health disparities. In this report, we describe the effectiveness of a unique and highly interactive enrichment program in garnering the interest of a diverse population of middle school students towards a career in the health field. **Methods :** To give youth a glimpse of life in medical school, we designed a structured program during the academic calendar that mimics the medical school's interactive curriculum. The workshops included but were not limited to lab practical's on human brain anatomy and sheep heart dissection, nutrition lectures, clinical skills sessions, bedside ultrasound, and robotics. The students were accepted through an application process. Students were sought out by their teachers and by interest in the medical field. We encouraged participation of those underrepresented in medicine by collaborating with schools in underserved areas. A feedback survey was distributed at the end of the program to measure the effectiveness of the program in helping them with their future goals and professional development as well as the effectiveness of the workshops. A 5-point scale was used, 1=least effective or 5 most effective. **Summary of results :** During the 2014-2015 academic year, 95 middle school students participated in the program and 57% were underrepresented in medicine. Of 95, 85 (89%) completed evaluations were collected. The average rating of the workshops ranged from 3.3 to 5.0, with anatomy lab and the medical school tour each having the highest rating of 4.7. As a result of this program, students gave an average rating of 4.4 out of 5 regarding their motivation to pursue a career in medicine, and a rating of 4.35 for interest in serving the underserved. **Conclusions :** The Hippocrates Circle of Kaiser San Diego was very successful in promoting the interest of a diverse population of youth towards a career in medicine. Long-term follow-up of the participants' career choices is needed.
