Rural Education in America provides a comprehensive
framework for understanding the diversity and complexity of
rural communities in the United States and for helping rural
educators implement and evaluate successful place-based
programs tailored for students and their families. Written by
educators who grew up in rural America and returned there
to raise their children, the book illustrates how efficacy is
determined by the degrees to which instruction,
interventions, and programs address the needs and strengths
of each unique rural community. Geoff and Sky Marietta

weave research, compelling case studies, and personal experience to illustrate effective approaches along the P-16 pipeline. Emphasizing the value and vitality of these communities, the authors advocate for solutions that fit the sociocultural and historical reality of the community, rather than strategies that fundamentally support out-migration. They also provide tools that can be used to evaluate rural educational initiatives and implement place-based strategies that are aligned with the strengths of a particular community. Rural Education in America includes examples from a range of geographic locations, including Eastern Washington, Montana, Ohio, northern Minnesota, North Carolina, Mississippi, Kentucky, and the Navajo Nation. Core chapters focus on critical issues for advancing rural education including early literacy, STEM education, and college completion while highlighting successful programs and partnerships in these areas. This book presents a vision of what rural education can be and how it can attend to the well-being of the people, places, and regions that it serves.

In *Who Counts?* Diane M. Nelson explores the social life of numbers, teasing out the myriad roles math plays in Guatemalan state violence, economic exploitation, and disenfranchisement, as well as in Mayan revitalization and grassroots environmental struggles. In the aftermath of thirty-six years of civil war, to count—both numerically and in the sense of having value—is a contested and qualitative practice of complex calculations encompassing war losses, migration, debt, and competing understandings of progress. Nelson makes broad connections among seemingly divergent phenomena, such as debates over reparations for genocide victims, Ponzi schemes, and antimining movements. Challenging the presumed objectivity of Western mathematics, Nelson shows how it flattens social complexity

and becomes a raced, classed, and gendered skill that colonial powers considered beyond the grasp of indigenous peoples. Yet the Classic Maya are famous for the precision of their mathematics, including conceptualizing zero long before Europeans. Nelson shows how Guatemala's indigenous population is increasingly returning to Mayan numeracy to critique systemic inequalities with the goal of being counted—in every sense of the word.

Margaret Thatcher transformed British political life forever. So did Ronald Reagan in the United States. Now Canada has experienced a similar, dramatic shift to a new kind of politics, which author Donald Gustein terms Harperism. Among its key tenets: A weakened labour movement--and preferably

the disappearance of unions--will contribute to Canada's economic prosperity Cutting back government scientific research and data collection will improve public policy-making Eliminating First Nations reserves by converting them to private property will improve conditions of life for aboriginal peoples Inequality of incomes and wealth is a good thing--and Canada needs more of it These and other essential elements of Harperism flow from neo-liberal economic theories propounded by the Austrian economist Friedrich von Hayek and his U.S. disciples. They inspired Thatcherism and Reaganism. Stephen Harper has taken this neo-liberalism much further in many key areas. As Donald Gutstein shows, Harper has successfully used a strategy of incremental change coupled with denial of the underlying neo-liberal analysis that explains these hard-to-understand measures. The success of Harperism is no accident. Donald Gutstein documents the links between the politicians, think tanks, journalists, academics, and researchers who nurture and promote each other's neo-liberal ideas. They do so using funds provided by ultra-rich U.S. donors, by Canadian billionaires like Peter Munk, and by many big corporations--all of whom stand to gain from the ideas and policies the Harperites develop and push. This book casts new light on the last ten years of Canadian politics. It documents the challenges that Harperism--with or without Stephen Harper--will continue to offer to the many Canadians who do not share this pro-market world view.
