This book reflects the recent dramatic advances in the use of modern imaging techniques to visualize and quantify the various components of cell structure and cell functional activity in the nervous system. Readers will find detailed protocols for imaging neurotransmitter and receptor mRNAs using radioactive and non-radioactive in situ hybridization technology. Methods for visualizing transmitter and drug receptors using quantitative autoradiography, sequence-specific antibodies, and immunocytochemistry are also clearly described. Plus, the book covers the imaging of biological activity in living cells, including methods of monitoring intracellular pH and calcium mobilization using selective ion-sensitive dyes in conjunction with flow cytometry and video microscopy. This is an essential guide for
