Precipitation Titration Lab Report. ABSTRACT To determine the chloride ion concentration in a solution, we performed precipitation titration by Mohr method in this experiment. Upon the addition of silver nitrate solution, precipitate was formed which indicates the presence of chloride ions in the sample. The indicator that we used was K₂CrO₄ that gave a reddish brown precipitate.

Using distilled water, rise the coil and then allow it to dry. Weigh and record it's mass. Decant the solution (pour it off) into a waste beaker. Add 10 to 15 mL of distilled water to the silver then decant again. Repeat this wash and decant process about three times. Obtain a piece of copper wire about 20 cm long.
