Cultural Selection

Cultural selection theory is the study of cultural change modelled on theories of evolutionary biology. Cultural selection theory has so far never been a separate discipline. However it has been proposed that human culture exhibits key Darwinian evolutionary properties, and "the structure of a science of cultural evolution should share fundamental features with the structure of the science of biological evolution". In addition to Darwin's work the term historically covers a diverse range of theo

Cultural selection theory is a scientific discipline that explains cultural change as the result of selection processes, much like the way biological evolution is explained by Darwinian selection. The paradigm of cultural selection is broader than the paradigm of memetics, because the latter sees cultural evolution as a selection of information units called memes, analogous to genes, while cultural selection theory includes selection processes that can not adequately be explained in terms of ...

Cultural evolution is the change of culture over time. If we define culture as "information capable of affecting individuals' behavior that they acquire from other members of their species through teaching, imitation and other forms of social transmission," cultural evolution is fundamentally just the change of culture over time.
