simulation solution.

DYNAFORM allows you to entirely bypass soft tooling, reducing overall tryout time, lower costs, increase productivity and provide complete confidence in the die system design. It also allows evaluation of alternative and unconventional designs and materials for an optimal solution.

Company founder  
Trevor Dutton has  
been working in  
forming simulation  
since the early 1990s  
and has pioneered  
many of the techniques  
in use today (see the  
Publications page for

FORMING Sheet Stretch  
Forming is a fast,  
economical, and  
accurate way to form a  
large panel from a  
metal sheet. The  
process involves  
stretching the sheet to  
a calculated yield point  
and forming it over a  
tool. Transverse Sheet  
Stretch Forming Press

Forming Solutions

Sheet Metal Cost

Simulation makes it possible to detect errors and problems, such as wrinkles or splits in parts, on the computer at an early stage in forming. In this way, it is not necessary to produce real tools to run practical tests.
