# Global Wind Systems Worksheet Answers

Thank you for reading **global wind systems worksheet answers**. Maybe you have knowledge that, people have look numerous times for their chosen books like this global wind systems worksheet answers, but end up in harmful downloads. Rather than reading a good book with a cup of tea in the afternoon, instead they juggled with some malicious virus inside their desktop computer.

global wind systems worksheet answers is available in our book collection an online access to it is set as public so you can get it instantly.

Our book servers hosts in multiple locations, allowing you to get the most less latency time to download any of our books like this

one.

Merely said, the global wind systems worksheet answers is universally compatible with any devices to read

So, look no further as here we have a selection of best websites to download free eBooks for all those book avid readers.

## **Global Wind Systems Worksheet Answers**

global wind systems answers 1. What wind systems move air from about 30° north or south latitude toward the equator? The northeast trade winds in the northern hemisphere and the southeast trade winds in the southern hemisphere. 2. Describe the movement of air in the huge convection current between 30° north latitude and the equator.

There are three pairs of major global wind systems, or wind belts: trade winds, westerlies, and polar easterlies. Trade winds are wind belts that blow from 30° latitude almost to the equator. They curve to the west as they blow toward the equator. Westerlies are wind belts that are found between 30° and 60° latitude.

Essential Question: How do I describe the global wind patterns?  
The region of Earth receiving the Sun's direct rays is the equator. Here, air is heated and rises, leaving low pressure areas behind. Moving to about thirty degrees north and south of the equator, the warm air from the equator begins to cool and sink.

## **Wind Systems Worksheets - Teacher Worksheets**

Global winds are composed of three different wind patterns: trade winds, polar easterlies and westerlies. The trade winds are located from 30 degrees latitude, north and south, to the equator. When cooling air sinks, the air flows steadily back down the equator. These winds are favored by sailors because of their warmth and steady stream.

Patterns: Air patterns are analyzed and used to predict weather systems. 2.) Cause and Effect: The effect of Earth's rotation causes air to move. The Sun heats the Earth unevenly, causing convection currents. 4.) Systems and Models: The movement of air along with Earth's rotation causes convection currents to interact, creating multiple wind patterns. The model used to display wind patterns illustrates interactions of moving water air, sun, and Earth's rotation.
