Parenteral Drug Dosage Calculation:
Alternative Formula Method. In Chapter
13, the alternative formula was
introduced as another method of
calculating drug dosages. This formula
also may be used when parenteral drug
dosages are calculated. Remember, the
formula is. $D A \times Q = x o r$ Desired

Available \times Quantity available = x
(unknown)

14. Parenteral Dosages | Basicmedical Key

Parenteral administration definition: It is a method of delivering the drug directly into the blood stream without having to pass the oral or alimentary mucous layer. I.e. the drug by passes the gut and enter the blood stream. This route of administration is possible if the drug is in liquid dosage form.

A route of administration in pharmacology and toxicology is the path by which a drug, fluid, poison, or other substance is taken into the body.. Routes of administration are generally classified by the location at which the substance is applied. Common examples include oral and intravenous administration. Routes can also be classified based on where the target of action is.
