Psychology - Research methods | Britannica

Case studies, surveys, naturalistic observation, and laboratory observation are examples of descriptive or correlational research methods. Using these methods, researchers can describe different events, experiences, or behaviors and look for links between them. However, these methods do not enable researchers to determine causes of behavior.

Research Methods in Psychology - SparkNotes

The aim of the study is a statement of what the researcher intends to investigate. The hypothesis of the study is an idea, derived from psychological theory which contains a prediction which can be verified or disproved by some kind of investigation, usually an experiment.
